

Eco Clean

Removes light dirt and fingerprints in seconds!

Details

Introducing the new Eco Clean device. In seconds, it will remove fingerprints and other dirt from all formats of disc.

This is particularly useful with Blu-ray discs where playability problems occur from fingerprints blocking the path of the laser.

The device has an automatic feed of cleaning solution – just insert your disc and close the lid to start the cleaning process. Once the LED turns green a few seconds later, reduce the pressure to end the cleaning procedure.

The disc will come out completely clean and dry.

Combine the Eco Clean with a disc repair machine to offer your customers a clean, like new disc every time.

Particularly popular with large volume disc repairers as part of a QC spot-check.

All our new machines...

- Include one-touch operation
- Require minimal maintenance and training
- Come with one year warranty and 30 day money back guarantee
- Have upgrade and part-exchange options
